

FITMON

SUBMISSION VIDEO SCRIPT

TEAM DA GOATS OMKAR KADAM · UJJWAL PARDESHI TARGET 3:10 WORDS ~465 ASPECT 16:9

VOICES 2 · SPLIT AT 1:34

Read at a normal speaking pace — roughly 150 words a minute. Do not rush it; the silences between beats are where the footage does the work. Every claim in this script is one the product can actually demonstrate on camera, so nothing here needs to be faked in the edit.

Two voices. Omkar narrates the first half and Ujjwal the second, and the split is not arbitrary — it falls exactly on the seam between what each of you actually built. Omkar carries the camera, the pose pipeline and the fatigue model; Ujjwal picks up at the on-device model and carries the game, the privacy argument, multiplayer and the close. A jury that hears each person explain the part they own reads as a real team rather than one narrator and one silent partner.

THE SCRIPT

Two sources only: **SITE** screen recordings of fitmon-iqoo.vercel.app and **DECK** captures of the fourteen-slide pitch deck. No prototype and no demo footage — nothing here depends on the app behaving on the day.

Two voices. Omkar narrates to 1:34, Ujjwal from there. The split falls on the seam between what each of you built: Omkar carries the camera, the loop, the grading and the fatigue model; Ujjwal picks up at breadth, the on-device model, privacy and the close.

TIME SOURCE ON SCREEN VOICEOVER

PART ONE — OMKAR KADAM

0:00 - 1:34 · 6 BEATS · ~215 WORDS · THE CAMERA, THE LOOP, THE GRADE, THE FATIGUE MODEL

0:00-0:14	SITE HERO	Load fitmon-iqoo.vercel.app. Hold on the hero — the headline and the iQOO 15 with the fight running on it. Do not scroll yet.	Every fitness app on your phone counts what you tell it. Tap ten, it logs ten. Not one of them can see whether the rep actually happened.
-----------	--------------	---	---

TIME	SOURCE	ON SCREEN	VOICEOVER
0:14-0:26	DECK SLIDE 02	Cut to the deck. Two boxes side by side; hold on the second long enough to read it.	This is what the app knows. And this is what actually happened – ten reps, four of them shallow, four centimetres of depth gone by the end. The gap between those two boxes is the entire product.
0:26-0:42	DECK SLIDE 03	The loop diagram. Let all five arrows draw, then hold on the blue note underneath.	Fitmon turns the front camera into a referee. Thirty frames a second, thirty-three body landmarks, a rep machine, a form score – and only then, damage. Every box on that line runs on the phone.
0:42-0:58	DECK SLIDE 04	The donut and the damage curve. Let the four arcs draw, then the curve.	A rep is not a count. It is four measurements, weighted – depth, range, tempo, alignment. And that score becomes damage on a curve, so a clean rep takes three hundred off the boss and a shallow one takes almost nothing.
0:58-1:20	DECK SLIDE 05	The fatigue curve. Let it draw completely, then hold two full seconds of silence on the finished chart. This is the most important shot in the video.	Then it does the thing nothing else on your phone does. It measures your velocity, your range, and the pauses between reps – against your own first three . Thirteen reps here, and you can see exactly where the movement changed. It knows you are fading before you do.
1:20-1:34	DECK SLIDE 06	The five-families table with the exercise photographs.	And fatigue is not one signal. A plank has no velocity, so we measure the shake. Five families of movement, fifty-one exercises, one estimator.

PART TWO — UJJWAL PARDESHI

1:34 - 3:10 · 7 BEATS · ~250 WORDS · BREADTH, THE ON-DEVICE MODEL, PRIVACY, THE DEVICE, THE CLOSE

Hand-off. Record the two halves separately – do not try to trade lines live. Leave a clean half-second of air at the join so the edit has somewhere to cut.

1:34-1:48	SITE #SCREENS	The sticky phone reel on the landing page – one device, the screens changing as you scroll. Scroll slowly and steadily; get three or four changes on camera.	Sixteen ways to play, all on one engine and one phone. Boss fights, holds, yoga, cardio, a race against a file, a streak, and a clinical test.
1:48-2:00	DECK SLIDE 08	The two-phones sync diagram. Let the event arrows draw.	Two phones make a duel. They exchange events rather than state, so the boss's health matches on both screens with no server between them.

TIME	SOURCE	ON SCREEN	VOICEOVER
2:00-2:16	DECK SLIDE 09	The coach slide. Hold on the two quotes — the coaching line, then the taunt.	Between sets, a twenty-three field summary of what your body just did goes to Gemma 3n, running on the phone. It writes the coaching, and it writes the taunt. It never sees a frame of video, because we never send it one.
2:16-2:30	DECK SLIDE 10	The privacy slide, full orange, with the on-device stack beside it. Hold on the four zeroes.	Your body never leaves the phone. No frame, no landmark, no form score has ever left a device — and none can.
2:30-2:46	SITE #OUTBREAK	Scroll to Outbreak on the landing page. Hold on the map with the pursuers closing. Cut to deck slide 11 if you want the numbers larger.	With one exception, and we say so on the page. Outbreak puts the chase on a real map — a sixty-second head start, then pursuers spawn around you and close. It uses your location, it asks when you start it, and the camera stays shut throughout.
2:46-2:58	DECK SLIDE 12	The device slide with the iQOO 15, front and back.	Built for the iQOO 15 — a ninety-degree front camera wide enough to hold a whole body from across a room, and the silicon to grade at camera rate and still run a language model between sets.
2:58-3:12	DECK 13, THEN 14	The three health-tool panels, then straight to the closing slide with the team and the URL. Let the last one sit for three seconds.	The same camera also runs an alarm you cannot dismiss from bed, a posture score, and the sit-to-stand a physiotherapist uses. A hundred and sixty tests, no runtime dependencies — it already runs. Fitmon. Your body is the controller. Your camera is the referee. Team Da Goats. Pune.

RUNNING TIME

Timed at a normal 150 words a minute this lands at about **3:10**. If the form caps you at 3:00, trim the deck-04 beat at 0:42 — it explains rather than proves. Never cut the fatigue beat at 0:58; it is the only thing in the video no other team can show.

THE ONE RULE

Every screen in this video is a real page or a real slide, and every number on them is read out of the repository. Nothing needs to be mocked up, so nothing should be. If a beat will not record cleanly, cut it rather than rebuilding it in an editor.

CAPTURE LIST

Everything is a screen recording. Record at 1920×1080 or larger and let the animations finish before you stop — several charts draw themselves over about a second and a half, and a clip cut too early shows a half-drawn line.

#	SOURCE	WHAT TO CAPTURE
01	Site — hero	Load fitmon-iqoo.vercel.app at 1440×900 and sit on the hero for ten seconds, then scroll a little so the parallax moves.
02	Site — #screens	The sticky phone reel. The most cinematic thing on the site — scroll slowly enough that three or four screens change on camera.
03	Site — #outbreak	The Outbreak section with the map. Hold once it is fully in frame.
04	Deck — 02, 03, 04	Open <code>DECK-PHASE1/INDEX.HTML</code> , press F for full screen, and record each slide from the moment it appears so the entrance animations play.
05	Deck — 05 and 06	The fatigue curve needs a full two seconds after it finishes drawing. Slide 06 has the exercise photographs, so give it a beat to read.
06	Deck — 08, 09, 10	Multiplayer, the coach and privacy. Slides 08 and 10 both have strokes worth waiting for.
07	Deck — 12, 13, 14	The device, the health tools and the close. Let slide 14 sit for three seconds on the last line.

PRODUCTION NOTES

Capture

- Record at **1920×1080 or larger**. The deck is authored at 1080p, so anything smaller resamples the type and it shows.
- Hide your browser chrome — full screen for the deck, and hide bookmarks for the site. A visible tab bar makes a product look like a prototype.
- Use a clean browser profile. No extension icons, no notifications mid-take.

Pacing

Audio

- Record the voiceover separately, indoors, close to the mic. Do not try to capture narration while training.
- Leave the app's own audio in under the voiceover on the rep beats — the count and the haptic click sell it.

Edit

- No speed ramps. The charts read as data; sped up they read as decoration.
- Hold the fatigue curve. It is the one image in the video that no other team has.

- Let every animation finish. The charts are the argument; a half-drawn one is worse than none.
- Scroll with the wheel or arrow keys at a steady rate. Do not accelerate.
- End on black with the wordmark and the URL. No music sting over the final line.

IF YOU ARE FORCED UNDER 90 SECONDS

Keep beats 1, 2, 3, 4 and the sign-off. Cut the coach, privacy, multiplayer and beyond-the-game beats entirely rather than shortening all of them – four beats told properly beats nine beats rushed. The fatigue curve stays in every version.

SPOKEN	SOURCE
30 frames a second	Camera loop target, <code>CONFIG/POSE.JSON</code>
33 body landmarks	MediaPipe Pose world landmarks
Depth, range, tempo, alignment	Four weighted parts of the form score, <code>SRC/FORMSCORER.JS</code>
~300 damage on a clean rep	Damage curve from <code>CONFIG/COMBAT.JSON</code> ; use the number your take actually shows
Against your own first three	Fatigue baseline, <code>BASELINEREPS: 3</code> in config/pose.json
23-field summary	Return shape of <code>SUMMARISE()</code> , src/coach.js
Gemma 3n on the phone	MediaPipe LLM Inference, between sets only
90-degree front camera	iQOO 15 specification, cross-verified against iQOO's own product page and GSMArena
30-second sit-to-stand	Published clinical protocol; the app counts it to the protocol's own rules
