

CLASHFIT

SUBMISSION VIDEO SCRIPT

TEAM DA GOATS OMKAR KADAM · UJJWAL PARDESHI TARGET 3:00 WORDS ~470

ASPECT 16:9

Read at a normal speaking pace — roughly 150 words a minute. Do not rush it; the silences between beats are where the footage does the work. Every claim in this script is one the product can actually demonstrate on camera, so nothing here needs to be faked in the edit.

THE SCRIPT

Three sources are cut together: **DECK** slides exported from the pitch deck, **SITE** screen recordings of clash-fit.vercel.app, and **LIVE** footage of a real set on a real phone. The rule of the edit is that the live footage carries the proof and the other two carry the explanation — never the other way round.

TIME	SOURCE	ON SCREEN	VOICEOVER
0:00-0:13	LIVE	A bedroom or empty office. Phone propped against a bottle on the floor, screen dark. You walk into frame and stop.	Every fitness app on your phone counts what you tell it. Tap ten, it logs ten. Not one of them can see whether the rep actually happened.
0:13-0:24	DECK SLIDE 02	Cut to the deck. The two boxes: "10 squats" against "10 reps, 4 of them shallow." Hold on the second box.	Here is what the app knows, and here is what actually happened. The gap between those two boxes is the entire product.
0:24-0:40	LIVE	Back to the floor. Screen wakes, skeleton overlay locks on, you start squatting. Hold on the overlay tracking the knee and hip.	ClashFit turns the front camera into a referee. Thirty frames a second, thirty-three body landmarks, and every rep graded before it counts — on depth, range, tempo and alignment.

TIME	SOURCE	ON SCREEN	VOICEOVER
0:40-0:56	LIVE SCREEN REC	Close on the phone screen. Damage fires on a clean rep, boss health drops. Then a deliberately shallow rep; hold on the small number.	Effort becomes damage. A clean rep takes three hundred off the boss. A shallow one takes almost nothing — so the only way to win the fight is to move better.
0:56-1:04	DECK SLIDE 10	The damage curve. Let the “worst rep / best rep” markers land.	That curve is not a metaphor. It is the damage model, and a bad rep visibly does less.
1:04-1:26	LIVE THEN DECK 08	The set continues, you visibly slow. Cut to the app’s summary screen, then to deck slide 08 with the full fatigue curve. Hold the curve for two full seconds.	Then it does the thing nothing else on your phone does. It measures your velocity, your range, and the pauses between reps — against your own first three . It knows you are fading before you do. And the boss staggers when you fade, instead of quietly making itself easier.
1:26-1:44	LIVE SCREEN REC	Between-sets screen. The coaching line types in, then the boss taunt underneath it.	Between sets, a twenty-three field summary of what your body just did goes to Gemma 3n, running on the phone. It writes the coaching, and it writes the taunt. It never sees a frame of video, because we never send it one.
1:44-1:58	LIVE	Pull down the notification shade, switch on airplane mode, return to the app, do another rep. It counts. Do not cut away before it registers.	All of it runs on the device. Airplane mode, no account, nothing uploaded. A camera in your bedroom that cannot phone home.
1:58-2:12	LIVE TWO PHONES	Two phones on the floor, two people doing push-ups, both screens legible. Then a tight two-shot of the screens showing the same boss health.	Two phones make a duel. They exchange events rather than state, so the boss’s health matches on both screens with no server anywhere between them.
2:12-2:28	SITE #TOOLS	Screen-record the landing page scrolling slowly through the health-tools section. Let the five rows pass at a readable pace.	And because the camera can see a body, the same engine runs an alarm you cannot dismiss from bed, a desk timer for the hours nobody trains in, and the thirty-second sit-to-stand a physiotherapist uses.

TIME	SOURCE	ON SCREEN	VOICEOVER
2:28–2:42	SITE #SCREENS	Screen-record the sticky phone reel on the landing page — the single device with the screens changing as you scroll. This is the most cinematic thing either of us built.	Fifteen ways to play, fifty-one exercises, five families of movement — all on one engine, all on one phone.
2:42–2:54	DECK SLIDE 13	The device slide, then cut to the real iQOO 15 in hand, turning to show the back.	It is built for the iQOO 15 — a ninety-degree front camera wide enough to hold a whole body from across a room, and the silicon to grade at camera rate and still run a language model between sets.
2:54–3:00	DECK SLIDE 23	Wide shot of you mid-rep with the phone in the foreground, then cut to the closing deck slide on black.	ClashFit. Your body is the controller. Your camera is the referee. Team Da Goats. Pune.

RUNNING TIME

Timed at a normal 150 words a minute this lands at about

3:00

. If the form caps you at 2:30, cut the deck-10 damage-curve beat (0:56) and the site-#screens beat (2:28) — they are the two that explain rather than prove. Never cut the fatigue beat at 1:04; it is the only thing in the video no other team can show.

THE ONE RULE

Do not fake a single frame of the interface. Everything in this script exists and runs — if a screen is not ready on the day, cut the beat rather than mock it up. A jury that has seen a live demo will spot a rendered screenshot instantly, and one faked frame puts every other claim in the video under suspicion.

SHOT LIST — WHAT TO ACTUALLY FILM

#	SETUP	WHAT YOU NEED IN THE CAN
01	Wide, phone on floor	You walking in, propping the phone, stepping back. Shoot this twice — once tight on the phone, once wide on the room. It is the establishing shot and the sign-off.
02	Over-the-shoulder, screen visible	A full set of squats with the skeleton overlay tracking. Get at least twelve reps so the editor can choose which ones to use.
03	Screen recording, not a camera	Damage numbers, boss HP falling, the CLEAN / SHALLOW verdict. Screen-record this separately at full resolution — filming a screen with a second camera looks amateur and moirés.
04	Screen recording	The summary screen with the fatigue curve drawing in. This is the most important four seconds in the video; get a clean take.
05	Screen recording	The between-sets coach line and the boss taunt appearing.
06	Handheld, close	Airplane mode being switched on, then a rep still counting. This shot proves the privacy claim better than any sentence can — do not cut away before the rep registers.
07	Two phones, two people	The duel. Both phones in one frame, both screens legible, both people moving. Then a tight two-shot of the screens showing the same boss health.
08	Quick cuts	Alarm, desk timer, sit-to-stand. Two seconds each is plenty.
10	Deck capture	Open <code>DECK-PHASE1/INDEX.HTML</code> full-screen (press F) and screen-record slides 02, 08, 10, 13 and 23 with the entrance animations playing. Do not screenshot them — the charts draw themselves and that motion is worth having.
11	Landing page capture	Screen-record <code>clash-fit.vercel.app</code> at 1440×900: the hero, the <code>#TOOLS</code> section scrolling, and the <code>#SCREENS</code> reel where the pinned phone changes screens. Scroll slowly and steadily — a trackpad flick reads as nervous on video.
09	Product	The iQOO 15 itself, front and back, in decent light. Slow rotation.

PRODUCTION NOTES

Framing

- Shoot the phone **side-on to the athlete**, exactly as the app tells you to. If the video shows bad framing, the first thing a judge learns about the product is that it is fussy.
- Whole body in frame, feet included. A cropped foot on camera undermines the ninety-degree field-of-view argument you make at 2:25.
- Keep the phone still. Prop it; do not have someone hold it.

Light

- Even, front-ish light. The pose model degrades in low light and you do not want to demonstrate that on camera.
- Avoid a bright window behind you – it silhouettes the body and the tracking suffers.

Audio

- Record the voiceover separately, indoors, close to the mic. Do not try to capture narration while training.
- Leave the app's own audio in under the voiceover on the rep beats – the count and the haptic click sell it.

Edit

- No speed ramps on the reps. If the footage is sped up, the movement stops looking like the thing being measured.
- Hold the fatigue curve. It is the one image in the video that no other team has.
- End on black with the wordmark and the URL. No music sting over the final line.

IF YOU ARE FORCED UNDER 90 SECONDS

Keep beats 1, 2, 3, 4 and the sign-off. Cut the coach, privacy, multiplayer and beyond-the-game beats entirely rather than shortening all of them – four beats told properly beats nine beats rushed. The fatigue curve stays in every version.

CLAIM CHECK

Every figure spoken in the script, and where it comes from, so nothing has to be taken on trust:

SPOKEN	SOURCE
30 frames a second	Camera loop target, <code>CONFIG/POSE.JSON</code>
33 body landmarks	MediaPipe Pose world landmarks
Depth, range, tempo, alignment	Four weighted parts of the form score, <code>SRC/FORMSCORER.JS</code>
~300 damage on a clean rep	Damage curve from <code>CONFIG/COMBAT.JSON</code> ; use the number your take actually shows

Against your own first three	Fatigue baseline, <code>BASELINEREPS: 3</code> in config/pose.json
23-field summary	Return shape of <code>SUMMARISE()</code> , src/coach.js
Gemma 3n on the phone	MediaPipe LLM Inference, between sets only
90-degree front camera	iQOO 15 specification, cross-verified against iQOO's own product page and GSMArena
30-second sit-to-stand	Published clinical protocol; the app counts it to the protocol's own rules
